About us

Sasol's Performance Chemicals business unit markets a broad portfolio of organic and inorganic commodity and speciality chemicals. Our business consists four key business divisions: Organics, Inorganics, Wax and PCASG (Phenolics, Carbon, Ammonia and Speciality Gases). About 6300 people (incl. employees from Regional Operating Hubs) in offices in 18 countries serve customers around the world with a multi-faceted portfolio of state-of-the-art chemical products and solutions for a wide range of applications and industries.

Our key products include surfactants, surfactant intermediates, fatty alcohols, linear alkyl benzene (LAB), short-chain linear alpha olefins, ethylene, petrolatum, paraffin waxes, synthetic waxes ,cresylic acids, high-quality carbon solutions as well as high-purity and ultra-high-purity alumina. Our speciality gases sub-division supplies its customers with high-quality ammonia, hydrogen and CO₂ as well as liquid nitrogen, liquid argon, krypton and xenon gases.

Our products are as individual as the industrial applications they serve, with tailor-made solutions creating real business value for customers. Ongoing research activities result in a continuous stream of innovative product concepts that help our customers position themselves successfully in future markets.

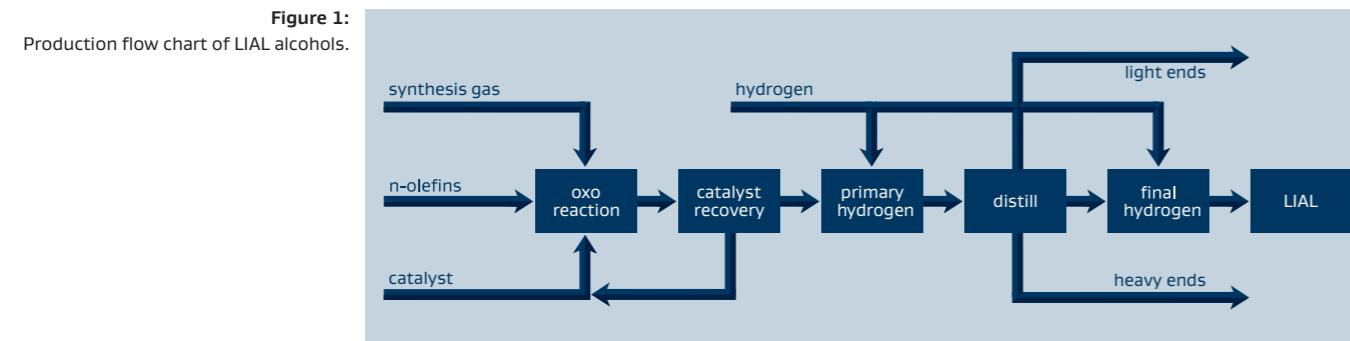

Our products are used in countless applications in our daily lives to add value, security and comfort. Typical examples include detergents, cleaning agents, personal care, construction, paints and coatings, leather and metal processing, hot-melt adhesives, bitumen modification and catalyst support for automotive catalysts and other diverse specialty applications including oil and gas recovery, aroma production, plastic stabilisation, and polymer production. Every day, our researchers explore ways to improve our products and develop innovations that improve the quality of people's lives.

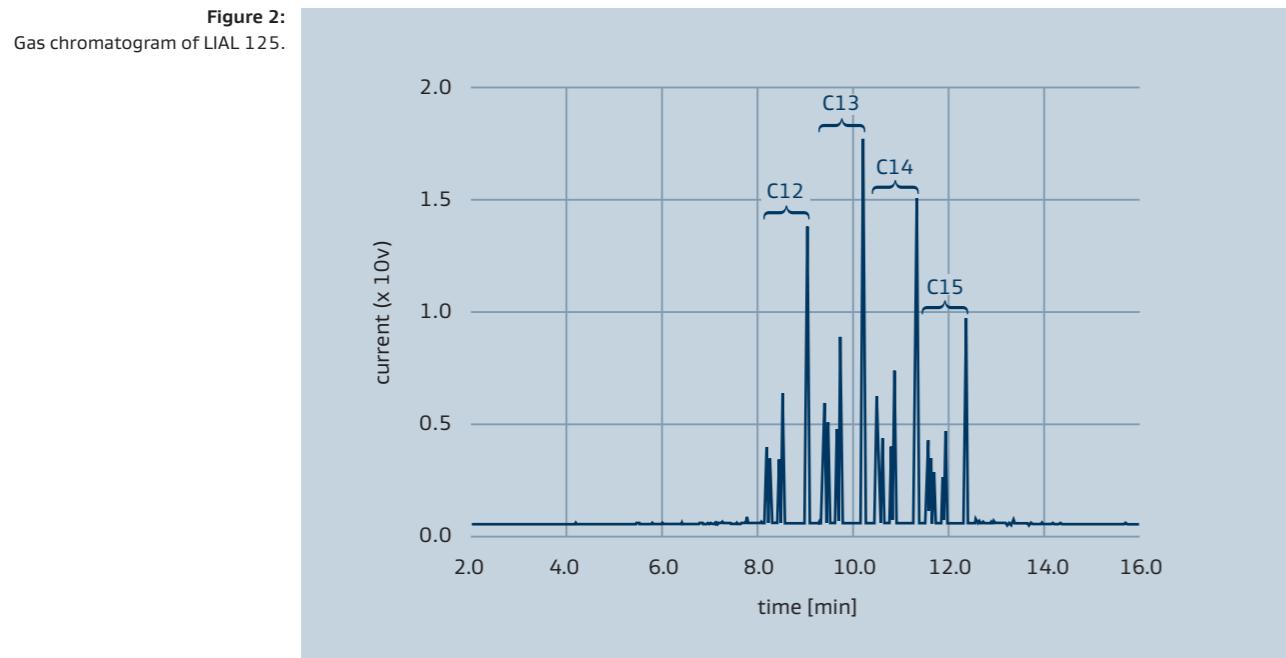

1. Sasol Italy alcohol portfolio

LIAL	Mixture of linear and monobranched C ₉ –C ₁₇ alcohols, single cuts and blends
ALCHEM	Linear C ₉ –C ₁₇ alcohols, single cuts and blends
ISALCHEM	Monobranched C ₉ –C ₁₇ alcohols, single cuts and blends

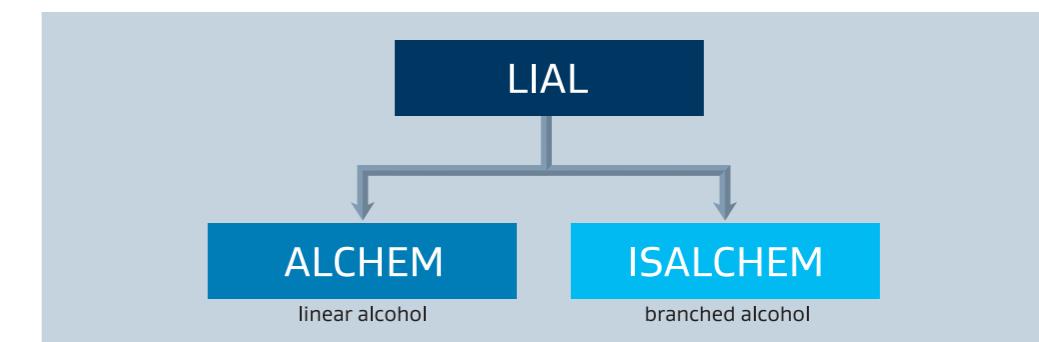

Sasol is a worldwide market leader of linear and branched alcohols, mixtures and derivatives. The alcohols produced by Sasol Italy in the plant sited in Augusta (SR), are obtained by hydroformylation and hydrogenation (OXO process) of petrochemical derived n-olefins. Figure 1 shows a block diagram of the entire manufacturing process.

The product obtained is a mixture of linear and primary C₂-monobranched alcohols with a well defined chemical structure, as clearly noticeable from the alcohol chromatogram reported in Figure 2. In Figure 3 the chemical structure of the C₁₂ isomers contained in LIAL alcohols is represented.

LIAL alcohols can be further processed in order to obtain ISALCHEM and ALCHEM alcohols that are the monobranched and linear fractions respectively. Moreover, additional blends can be prepared according to customer requests.

The different chemical structure of the LIAL (mixture of linear and branched alcohols), ALCHEM (linear alcohols) and ISALCHEM (branched alcohols) produces relevant differences in the physical-chemical properties both in the alcohols (as in the case of pour point, see Figure 4) and in the corresponding derivatives, giving us the possibility to offer the product that better fits our customer requirements.

Figure 3:
Chemical structure of C₁₂ isomers
in LIAL alcohols.

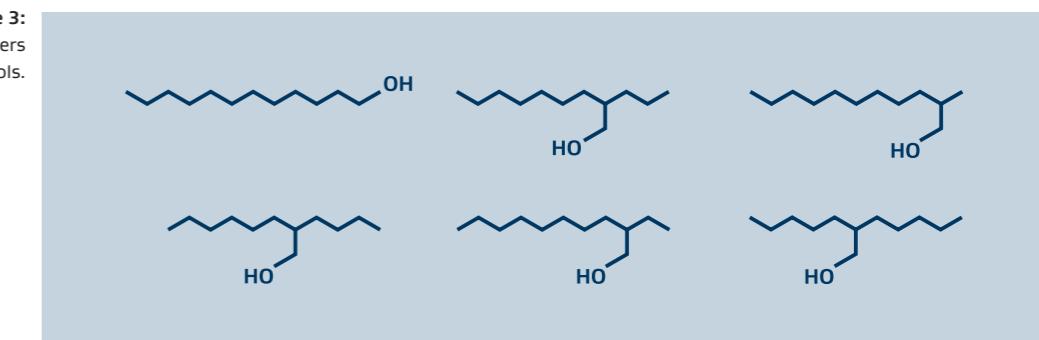

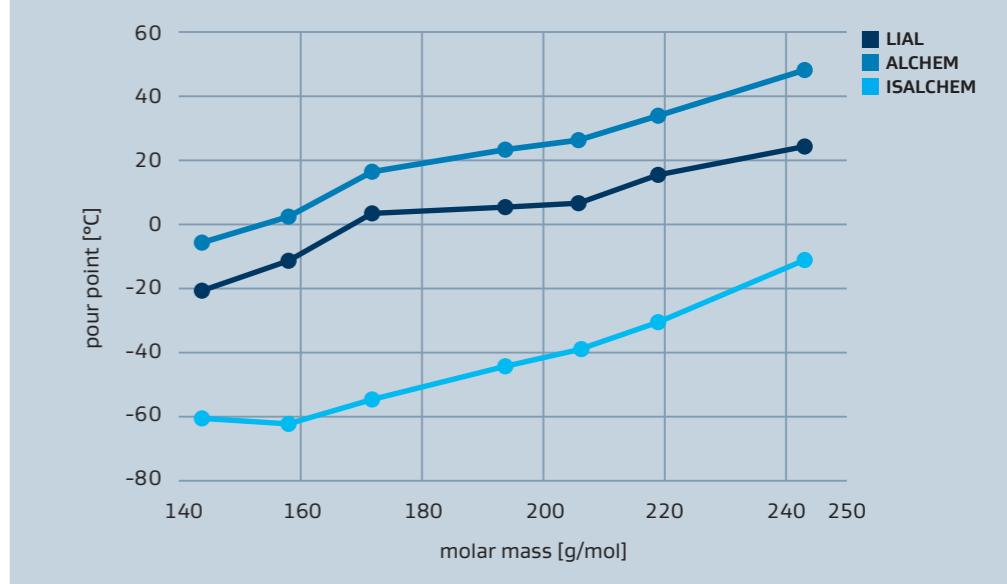

Figure 4:
Pour point of LIAL, ALCHEM
and ISALCHEM alcohols
vs the molecular weight.

2. Applications

Due to the wide range of structure and properties, LIAL, ALCHEM and ISALCHEM alcohols can be used as is or derivatized to be successfully used in several application fields.

Detergents and I&I cleaners

- Washing powders
- Liquid detergents
- Detergent tablets
- All purpose cleaners

Cosmetic and personal care

- Shampoos
- Bath foams
- Toothpastes
- Hair conditioners
- Creams & lotions
- Make-up products

Plastic additives

- Plasticizers
- Lubricants
- Stabilizers
- Polymerization auxiliaries

Textile & leather

- Scouring agents
- Wetting agents
- Softeners
- Emulsifiers

Metal processing

- Coupling agents
- Aluminium rolling oils
- Metal working liquids

Pulp & paper

- Deinking
- Flootation agents
- Foam depressant

Agrochemicals

Flavour & fragrances

3. Other products and trademarks

Based on LIAL, ALCHEM and ISALCHEM, we produce the following derivatives:

LIALET	LIAL alcohol ethoxylates
BIODAC	Short chain alcohol ethoxylates
MARLOX	LIAL alkoxylates
NONIDAC	Alcohol ethoxylates
DACLOR	LIAL ethoxysulphates
DACPON	Alcohol sulfates
ANIODAC	Alcohol ethoxysulphates
COSMACOL	Esters
